

New from WFG Enterprise Solutions

Bringing the borrower on board from the beginning minimizes refinance transaction application-to-close turn times!

Surging mortgage refinances have exacerbated transaction delays. Redundant emails, lost documents, and chasing down critical data not only slow down the origination process, they frustrate borrowers and lenders as well.

Now, with the introduction of the **MyHome® Exchange**, lenders have an intuitive tool that engages the borrower upfront.

Adapted from WFG's hugely popular **MyHome** platform for the residential resale market, **WFG Enterprise Solutions** introduces the **Exchange**, to make it even easier for borrowers to submit their required information and documents.

WFG's MyHome brings mortgage transaction participants together within a single, easy-to-use environment, enhancing communication and transparency, and providing a better borrower experience. It streamlines the loan process and increases throughput by eliminating duplicate touchpoints, enabling pro-active communication, and facilitating data and document collection, storage and sharing.

MyHome:

Connects transaction participants and significantly improves the consumer experience by providing a convenient, secure and intuitive self-service ecosystem for enhanced transparency.

Increases operational capacity by collecting and delivering documentation and information in a secure repository, enabling the processing and closing of more loans.

Reduces applicationto-close turn-times, eliminates operational waste, and improves lender throughput, resulting in more closed loans.
